SHÜÜT

Brand Guide v2.0

Voice first. A more human feed.

SHÜÜT is pronounced **shoot**. The umlauts are a deliberate brand device rather than a phonetic instruction. They give the name personality, make the double-U memorable, and create four dots that can become a recurring visual language across the product.

1. Brand name & logo

The display brand is **SHÜÜT**. Use **SHUUT** in URLs, handles, email addresses, filenames, code and other contexts where diacritics are inconvenient.

The two Ü characters are the signature. The four umlaut dots should remain clearly visible and optically balanced. In the primary logo, the dots use SHÜÜT Blue while the letters use Charcoal.

Logo rules

Display spelling	SHÜÜT
Pronunciation	SHOOT
Technical spelling	SHUUT
Clear space	At least the diameter of one umlaut dot around the complete mark.
Do not	Remove individual dots, tilt the dots, change their spacing independently, stretch the wordmark, or use

2. ÜÜ symbol, app icon & favicon

The standalone symbol is **ÜÜ**: two bold Us with four umlaut dots. This is the preferred shorthand for app icons, favicons, profile badges, notification icons and compact brand placements.

180 x 180
Apple touch

128 x 128
App / profile

64 x 64
UI

32 x 32
Browser

16 x 16
Favicon

Primary icon

SHÜÜT Blue rounded square, white UU, white umlaut dots. On dark or light neutral surfaces, the dots may switch to SHÜÜT Blue while the Us take the contrasting foreground colour.

At 16 px the symbol must remain recognisable. Do not add the full wordmark inside the favicon. The entire point of the ÜÜ shorthand is to survive at tiny sizes.

3. Colour

Blue is the brand signal. Charcoal and white do most of the structural work, keeping transcripts and conversations calm and readable.

	SHÜÜT Blue	#3B82F6	Primary / umlauts / actions
	Charcoal	#111827	Text / dark surfaces
	Slate	#6B7280	Secondary text
	Cloud	#F3F4F6	Surfaces
	White	#FFFFFF	Background
	Success	#10B981	Positive / live
	Warning	#F59E0B	Warning
	Error	#EF4444	Error / destructive

4. Typography

Primary: **Inter**. Use it across product UI, transcripts, navigation, onboarding and most marketing. Its clarity matters particularly because SHÜÜT is a reading experience as much as it is a listening experience.

Secondary display: **Manrope**. Optional for larger campaign headlines and editorial moments where a slightly warmer, rounder voice is useful.

Campaign display	Inter Bold / Manrope Bold	48-72 px
Product H1	Inter Bold	32-48 px
Product H2	Inter SemiBold	24-32 px
Transcript / body	Inter Regular	16-18 px
Metadata	Inter Medium	12-14 px

Writing the name

SHÜÜT in headlines, logos and brand-forward copy. **Shüüt** may be used only if a sentence-case product treatment is intentionally introduced later. For now, uppercase SHÜÜT is the canonical brand styling.

5. Graphic language

The four umlaut dots are now a core brand asset. They can animate as recording indicators, listening pulses, loading states or simple punctuation-like dividers. The other natural visual asset is the audio waveform.

Use the four dots with restraint. They should feel like a recurring signature, not confetti. Their spacing should echo the spacing of the umlauts in the logo whenever practical.

Voice & messaging

Working positioning: Voice first. A more human feed.
Campaign line: Talk it. Share it. SHÜÜT it.
Product language: Say it. Listen in. Add your voice. SHÜÜT a reply.

The product should sound conversational, immediate and human. Avoid framing voice as 'audio content'. SHÜÜT is about people speaking to people, with transcription making those conversations easy to scan, search and share.

6. Direction board

This updated direction board replaces the macron-based v1 identity. The canonical system is now SHÜÜT + the ÜÜ standalone symbol.

Canonical display brand: SHÜÜT
Canonical compact symbol: ÜÜ
Technical / URL spelling: SHUUT
Pronunciation: SHOOT
